

AMXI 系列 SERIES

磁力驅動無軸封泵浦
MAGNETIC DRIVE SEAL-LESS PUMP

<http://www.assoma.com.tw>

榮獲
PATENTED IN
德國、台灣
GERMANY, TAIWAN (R.O.C.),
日本、大陸
JAPAN, CHINA (P.R.C.),
韓國、英國新型專利
KOREA, UK.

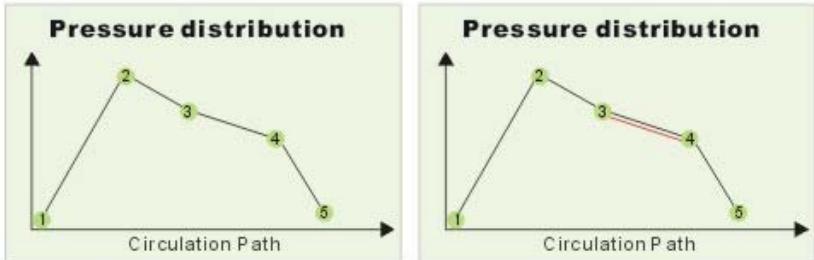

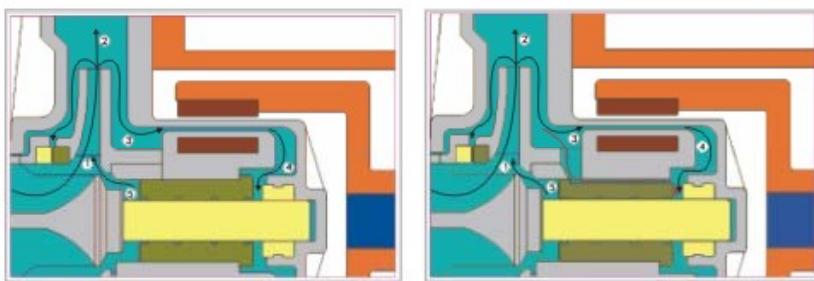

專利功能 Patented Function

AMXI系列是全球內襯氟化塑料磁力驅動泵浦中，唯一具有優異長效耐空轉特性及軸向推力緩衝機構兩項專利，且性能優異的系列機種。

ASSOMA AMXI series is the only one in the world, using a metallic outer casing lined with E TFE engineering plastics, equipped with two patents: A distinct construction to reduce overheating from DRY RUN and an axial BUFFER SYSTEM to absorb vibration and shock by abnormal operation.

AMXI系列是協磁公司專為克服無軸封泵浦經常遇到的異常現象，如“空轉”、“汽化”等導致泵浦嚴重損壞的全新系列產品。

AMXI is a new series specially designed to overcome harmful damage to a sealless magnetic drive pump by some abnormal conditions, such as dry run, and cavitation, etc.

DRY RUNNING SHOWN AT ACHHEMA 2003

強固的結構 Robust Structure

AMXI 系列不僅適用於一般化學輸送及製程用途，由於其強固的金屬外殼護罩及內襯氟化塑料設計，更適用於高溫、高壓，強酸、強鹼等嚴峻條件。

AMXI series is not only used for general chemical transportation and processing, due to its robust structure of metallic outer casing lined with E TFE engineering plastics, but also suitable to use under high temperature, high pressure, critical acid or alkaline applications.

AMXI 系列已獲多項國際專利，其優異的機械及水力性能除在實驗室中長期驗證外，並參加多項國際性展覽，普獲好評。

AMXI series obtained several patents worldwide. It is well receipt by customers for its outstanding mechanical structure and hydraulic performance. It has been verified satisfactorily on the long trial run in the lab and displayed in several international exhibitions, and highly appraised by the public.

由泵浦流力設計軟體計算出最佳流道幾何，配合流場分析，掌握流動特性，使流力損失降為最低，提高葉片流力效率。

The geometry of impeller and casing are generated by professional hydraulic design programs. In addition, Computerized Fluid Dynamic (CFD) method is used to control stream pattern, thus reducing hydraulic loss and increasing pump efficiency.

高效率水力設計 High Efficient Flow Design

AMXI的軸承潤滑迴路，首創雙面對流冷卻設計，在同樣的潤滑熱量下，可帶走更多流量，即使空轉時，也可降低熱平衡溫度，提高抗空轉能力。

The revolutionized bearing design with dual-channel circulation on both inner and outer surfaces of bearing contributes to rapidly heat dissipation.

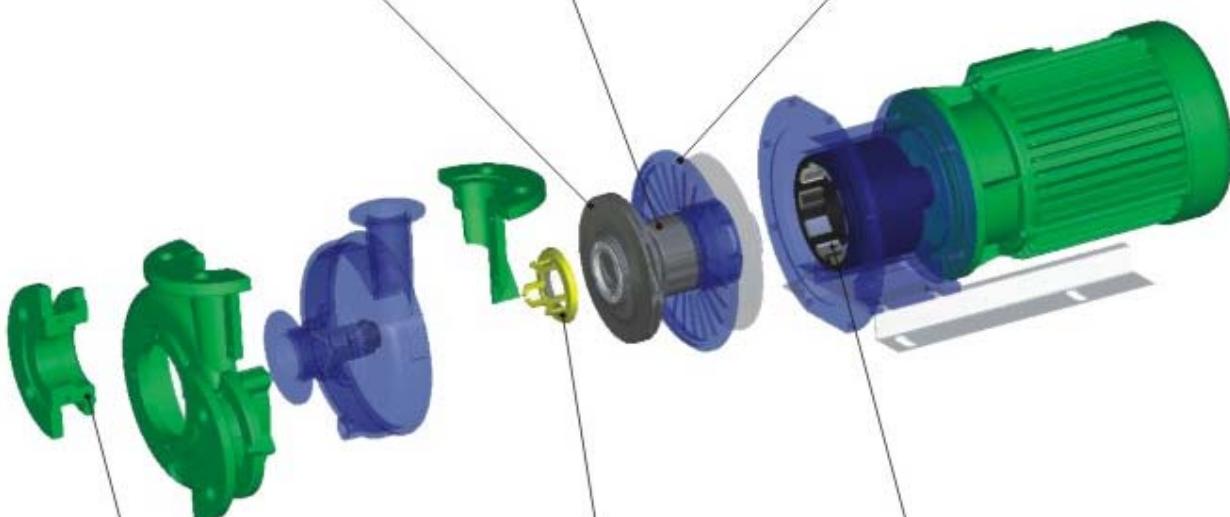

The circulation leakage of sealless pump is fully utilized to reinforce convectional heat transfer that lowers thermal balancing temperature and prevents damage even under dry running.

以電腦輔助設計及分析強調可靠度及最佳化的現代設計理念。

Using fully computer aided design and analysis to assist product development. This modern design concept helps ASSOMA's products lead to high technical industry.

結合CAD/CAE的科技產品 Integrate CAD/CAE System

高強度本體結構 High Strength Construction

全系列採用金屬內襯氟化塑膠材質，可同時符合強度與耐蝕性需求。

The AMXI series uses a metallic outer casing and a volute made from engineering plastic to provide the required structural strength as well as the needed corrosion resistance.

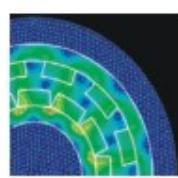

專利緩衝止推系統 Patented Buffer System

獨具創意的動態式緩衝座，除具備緩衝作用以吸收泵浦葉輪在吸入條件惡劣時之振動外，並提供止推環與葉輪磨損環間一動態式的平面接觸，藉以保持摩擦面之有效接觸面積，並大幅提高止推環可靠度及使用壽命，可降低疲勞損害。

Our innovative dynamic buffer is specially designed to absorb vibrations and shock caused by adverse operating conditions. At the same time, the dynamic buffer is self-adjusting, allowing a better face to face contact between the thrust ring and the wear ring, thus, minimizing wear and prolonging their service life.

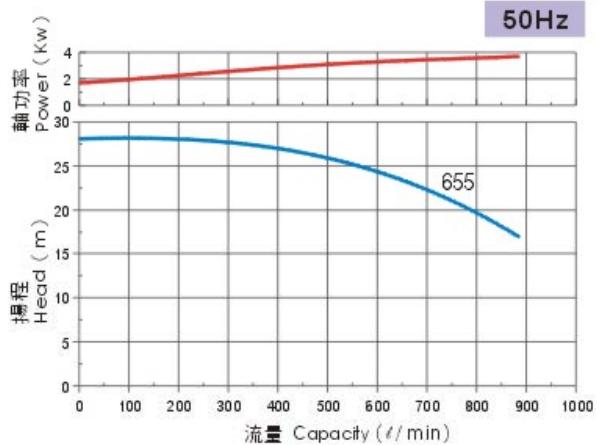

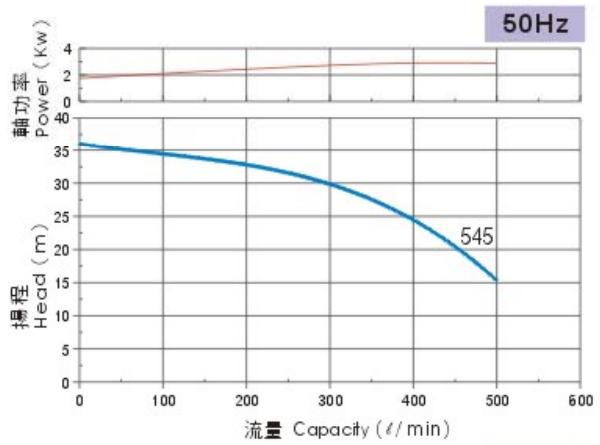

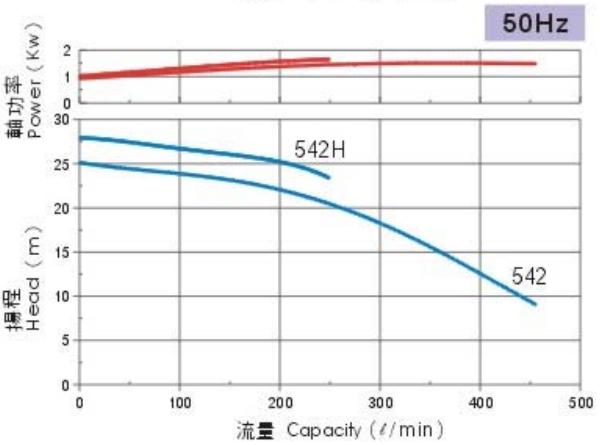

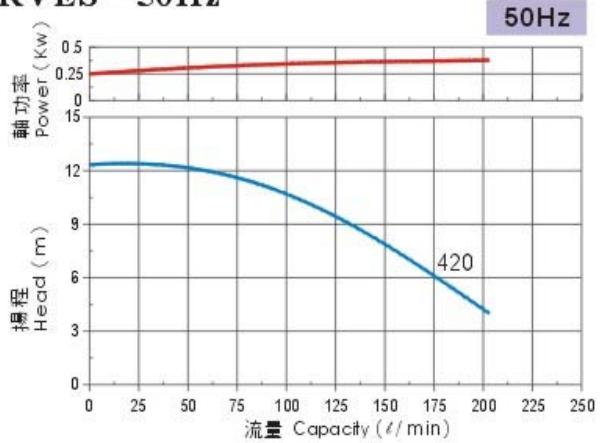

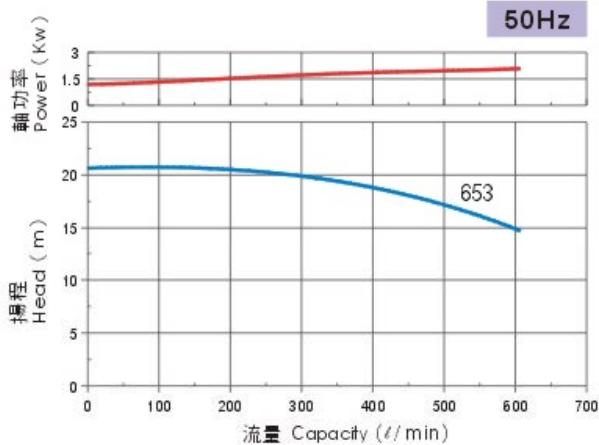

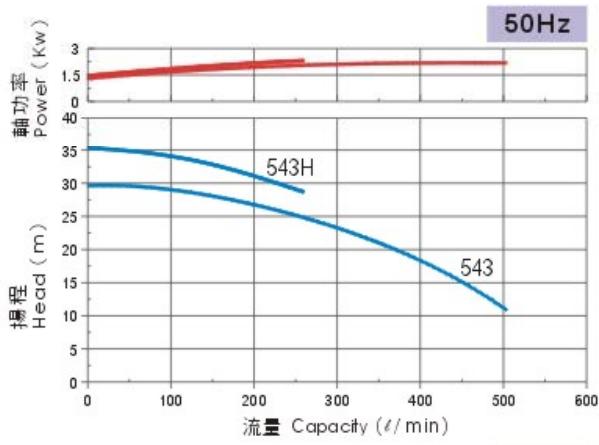

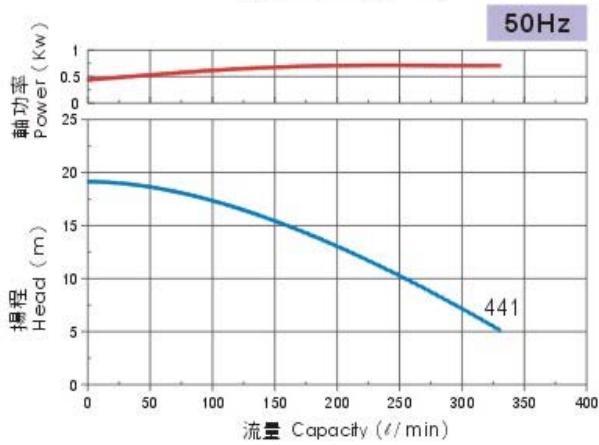

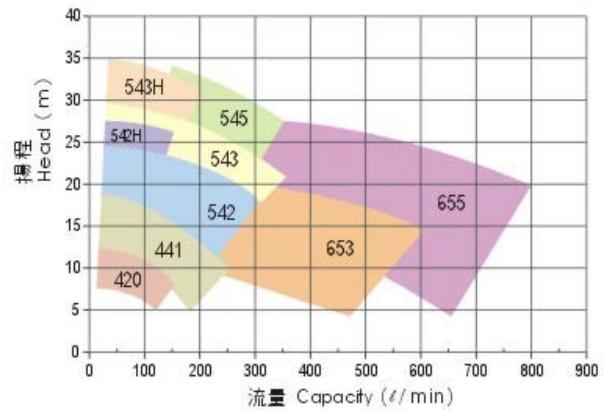

高性能磁偶合器 High Performance Magnetic Coupling

利用磁場分析軟體計算磁扭距，提高磁鐵利用率，確保足夠的偶合動力餘裕以避免滑脫。

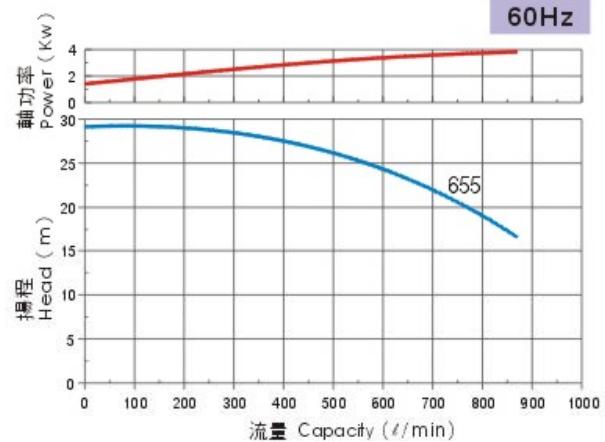

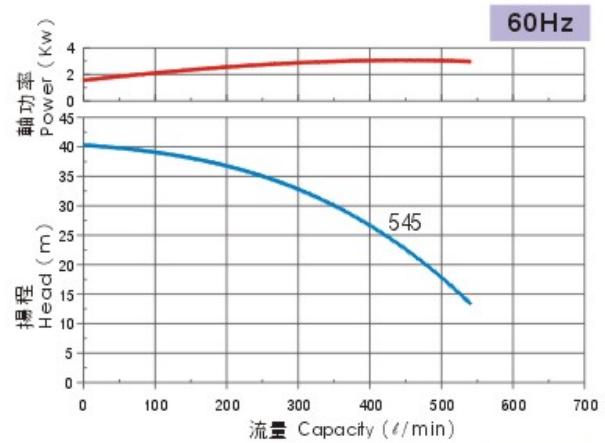

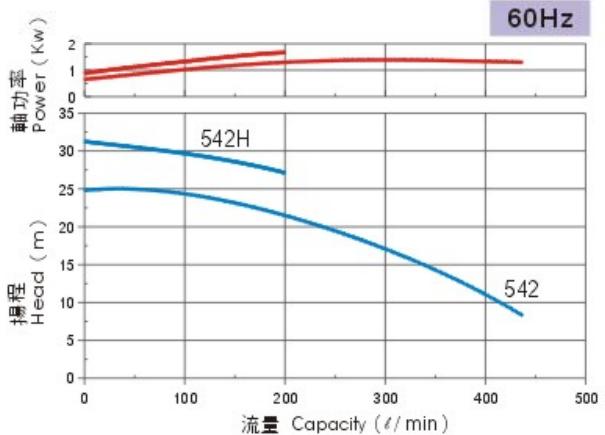

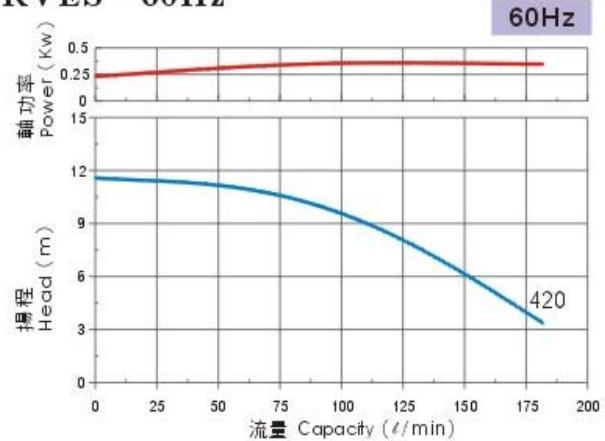

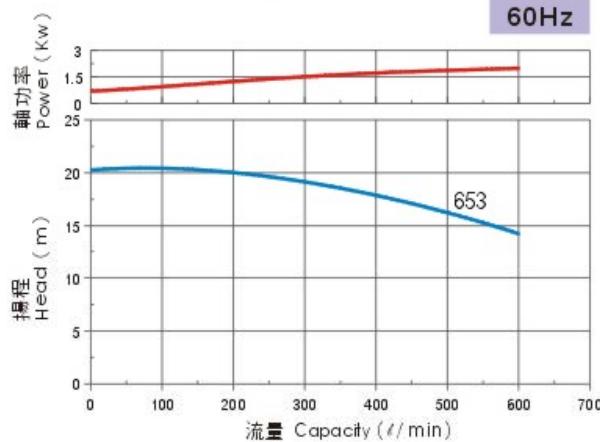

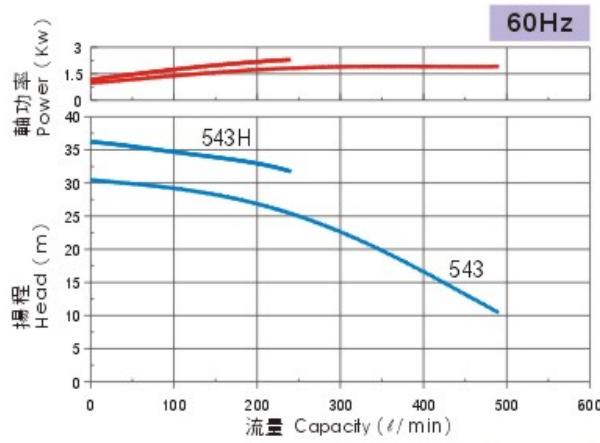

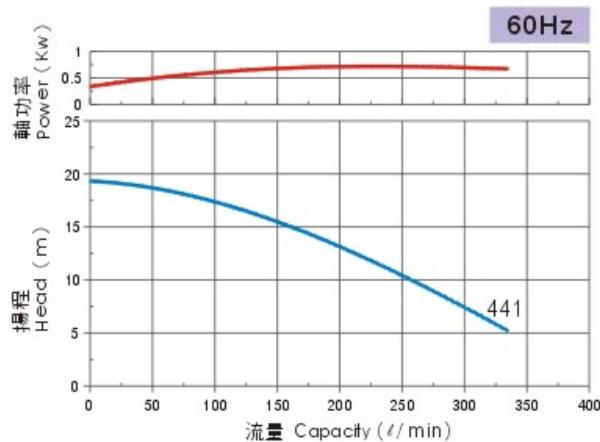

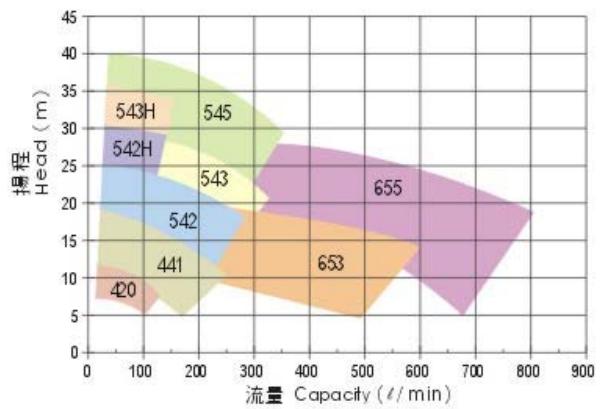

We utilize magnetic field analysis programs to calculate magnetic torque to maximize magnet utilization and ensure sufficient torque margin to prevent decoupling.
